Viewer is up at: <https://r8.ercloud.org/GoldKing/>

Viewer is public.

I will copy the existing Animas Map Services now.

I will add the viewer and photos once we get the epaosc.org site.

Thanks

John L.,

Please:

1. Create a JavaScript site viewer for Gold King Mine with all the standard ER widgets plus SADIE.
2. Make the viewer open to the public

3. Copy the existing Animas map services to create Gold King specific services. This way they can be edited without disrupting the Animas site viewer and be open to the public.
4. Connect the Gold King viewer to the newly create Gold King OSC.net web page.

Thanks,

John Wieber

Subject: Upper Animas

Team,

Upper Animas is becoming a highly visible site which provides us the opportunity to integrate spatial and non-spatial data using our new tools and yet to be implemented processes. This will, however, require close coordination between us technical people. There is a meeting scheduled next week between the EPA team to begin the data management discussion. A site specific data management plan may or may not be forthcoming, but I want to ensure that any data for this site be consistently managed using new processes that we have been discussing. There will also be data flowing in from multiple parties, making the task even more challenging.

I will be tasking both ESAT and START where I can to distribute the workload. There is currently a SCRIBE project UpperAnimasRiver with AN!m@5 as a password. I am not aware of other SCRIBE projects pertaining to this site. Please inform me if you get asked to perform work on this site that is not tasked directly by me.

John L., please consider this authorization to proceed converting the existing FLEX viewer for this site to JavaScript. I would like to see this completed by 8/10/15. If this deadline does not work for you, please let me know.

Subject: FW: START IT Update

See below. We will be using the Animas Viewer for the START work so if you want to meet to discuss sharing the viewer let me know. Also do you have the Scribe subscription information for Animas database?

Thanks

Hi, John.

FYI, the Upper Animas Watershed Mine Site and Upper Animas Soils projects will use the Animas Viewer. I'm managing the Watershed project and Elliott is doing the soils. We will send you documents/data when available.

Soils Project: The data management plan for Upper Animas soils is due August 14, so you should see it by then. We will be adding reconnaissance polygons initially, and XRF and lab data later.

Watershed project: This project involves interpretation of existing data and no START sampling or analysis, so we will not necessarily be generating Scribe data. It is possible we will need to put USGS, ARSG, or AGS (other agencies) data into Scribe. I'll let you know. If you have a subscription to the current EPA Animas Scribe database, please send the info so I can access it. If not, I'll ask Dan Wall at EPA and he can get me a subscription. Do you think we need a data management plan for this one? (It's not specified in the TDD, but let me know if you think it will be helpful.
